REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

The instant application is directed towards an unobvious improvement in the gas turbine airfoil clearance art. Specifically, Applicant claims an airfoil assembly comprising an airfoil having a hollow pocket formed in the its distal end. A tip insert is recessed in the pocket and is engaged by a spring member that also engages the airfoil within the pocket. The pocket further comprises an abutment surface. The spring member and the abutment surface serve to limit the distance the tip insert can extend out of the airfoil pocket.

Prior art US 3,117,716 to Wernicke discloses a similar concept wherein the airfoil has a tip pocket and a tip insert. Wernicke further disclose the use of a spring to limit the amount the extension the tip insert can make. Wernicke, however, does not disclose an abutment surface and uses a cushion of fluid flow over the insert to maintain the proper clearance of the blade. Prior art US Patent 4,817,970 to Krauss discloses a seal device of similar concept to the claimed device. Krauss discloses a device wherein the sealing member is extended by the centrifugal forces of the rotating shaft and is limited by the spring member 15. Krauss does not teach or suggest this device as a airfoil nor does he disclose a pocket or abutment surfaces as claimed by Applicant.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
